LIGHTWEIGHT INFLIGHT CONNECTIVITY SOLUTION LAUNCHED

27/05/2011

OnAir and TriaGnoSys have launched a lightweight solution that allows business jet passengers to use their mobile devices and laptops during flights.

OnAir is the telecoms services provider, with TriaGnoSys providing the hardware and software elements for both the aircraft and the ground. The airborne equipment consists of two small, lightweight units, that connect to the aircraft's existing satellite communications system.

Ian Dawkins, CEO of OnAir, said, "Given how much business people use their mobile phones, it isn't surprising they want stay in touch when they are flying, and that is particularly true of business and VIP passengers. We are therefore making it very simple for operators of business jets to provide inflight connectivity services. It is also very simple for passengers: just make a call, send a text message or look at email as you do on the ground."

The lightweight and complete turnkey solution for business jets enables passengers to use their mobile devices during flight
